

EDUCATION

The University of Texas at Austin – *B.S., Electrical and Computer Engineering (GPA: 3.21 / 4.00)* 5/2019
Coursework – *Algorithms, Data Structures, Software Implementation & Design, Digital Logic Design, Discrete Mathematics, Probability & Statistics, Data Science Laboratory, Concurrent & Distributed Systems*

WORK EXPERIENCE

Longhorn Center of Academic Excellence (LCAE) – *Web Administrator Intern; Austin, TX* 9/2017 – Present
• Used WordPress to update and manage websites and collaborated with staff to improve content/UI
• Communicated with staff members to obtain requests for content creation, updates, and corrections

The Foundry Makerspace – *Technical Intern; Austin, TX* 9/2016 – 2/2017
• Assist students with technical difficulties with tools, machinery, and tech in the makerspace
• Achieved communication skills by working with staff members to keep the studio industrious

PROJECTS

Transient – *Web Messaging System Project* 12/2017
• Created an application in a group of five where users anonymously communicate in channels amongst users
• Users can create, share, and destroy transient channels that included properties such as time availability
• Developed using jQuery and Google Firebase to manipulate channels, store messages and user information

Safely – *HackTX Android App Project: JP Morgan Challenge Winner (1st out of 19 teams)* 10/2017
• Developed an Android app to assist people in visualizing those impacted by natural disasters and its severity
• Used Google Maps API and Google Firebase to store incident information and display incidents worldwide
• JP Morgan Social Good Challenge Winner: Best Use of Social Media Data for Disaster Response

Chat Client – *Java Programming Project* 4/2017
• Developed a chat client using Java fundamentals, reflection, and socket programming
• Implemented JavaFX to create a visually appealing Graphical User Interface for users to communicate
• Users were able to send private/group messages from different machines, send emoticons, log in with unique credentials, and implemented a SQL database that sanitized and stored info and messages

Pole Position – *Embedded Systems Video Game Project, Finalist* 5/2016
• Worked with a partner to program an obstacle racing game onto an embedded system using C and Assembly
• Constructed graphics to display on an Adafruit ST7735 LCD and implemented a 4-bit DAC for sound effects
• Selected as a finalist for a class competition to demonstrate creative and impressive video game projects

LEADERSHIP & ACTIVITIES

Freetail Hackers – *Tech, Creative Organizer* 1/2016 – 1/2018
• Organized hackathons such as HackTX to challenge students in computer programming
• Collaborated in designing graphics for the HackTX website, themes, banners, and logos

CodePath University – *Web Security Student* 1/2017 – 5/2017
• Learned cybersecurity fundamentals involving concepts such as penetration testing and encryption

SKILLS

Programming Languages:	Java, C, Python, Android, Verilog, HTML, CSS, JavaScript, Assembly
Frameworks & Tools:	Eclipse, JUnit, GDB, Valgrind, Git, jQuery, Bash, Hadoop
Languages:	Conversational Cantonese, Basic Spanish
Work Eligibility:	Eligible to work in the U.S. with no restrictions
